
30-minute recovery confirmation | P1 retrospective inferred-network cohort | test n = 3,933
All three use F3 + the same 12 S1 summary fields, not full F7. Fixed threshold 0.5.
Geographic neighbors observed for 67.2% of test events versus 100% directed/pooled; missingness is retained.
Small directed–pooled differences do not establish a direction-specific or causal effect.
